Application No.

Continuation of 11, does NOT place the application in condition for allowance because: Applicant argues with respect to claim 3 that the rejection should be withdrawn as Pickard does not disclose upper and lower water supply ports. The water swivel 20 of Pickard is used to conduct fluid from pump 25 down to drill bit 15. The swivel 20 inherently has two water supply ports as water is fed to it at one end and water exits it at the other end. Additionally, applicant argues that Pickard does not accommodate an overshot assembly at an intermediate position. The position of the overshot assembly is not claimed with any point of reference, so the limitation "intermediate position" broadly interpreted could mean literally anywhere and was not given patentable weight. The arguments regarding claim 4 are not considered as the addition of the limitations of claim 3 to claim 4 would require further search.
